Eroticissima x Sex Now, 2025.

Proposal 01

The Maze of Desire & Control

Concept & Themes

This installation immerses visitors in a surreal, dreamlike maze where they must navigate shifting corridors of velvet and chains, making choices that test their boundaries of *power, submission, and voyeurism*. Each “chamber” is a different environment, revealing private momentus of the piece. Some paths lead to indulgence, others to restriction, and some to complete surrender.

The experience within the space, plays with the tension between control and submission, privacy and exposure, and pleasure and restraint—all within a luxurious, red-drenched dungeon-like maze.

Installation Setup

The Physical Environment (*What people experience outside VR*)

The real-world space is designed to match elements of the VR experience, reinforcing immersion.

- * Velvet-Lined Walls & Padded Pathways: The maze is physically built with soft-touch materials matching the VR visuals.
- * Draped Curtains & Suspended Chains: Users push aside fabric to reveal hidden rooms or unexpected passages.
- * Subtle Wind & Temperature Changes: Fans or controlled airflow create the illusion of movement and presence.
- * Reactive Lighting: LED lights shift depending on the choices made in VR—red for restriction, purple for voyeurism, gold for indulgence.

Eroticissima World (*What they see inside the headset*)

- * The experience opens at Miyō's Sex Room a deep crimson corridors, some lined with plush velvet, others cold and metallic.
- * The environment shifts dynamically based on decisions, gestures, gaze-tracking and Character selection.
- * Certain passageways only appear if the user submits to an interaction (e.g., looking down, staying still, or allowing themselves to be 'guided').
- * Other routes open when they assert dominance during the multiplayer mode (e.g., making aggressive movements, grabbing virtual chains, or choosing a commanding voice option). This opens the dialogue between participant to explore their own desires and digital & sexual identity.

Experience & Journey

Phase 1: Entering the Maze

Upon putting on the VR headset, the expectators stands before a towering, velvet-draped archway. A seductive yet enigmatic voice welcomes them:

"You may leave at any time... or you may surrender to the unknown. Step forward, if you dare."

As they move forward, doors appear based on their first decisions (hesitation, curiosity, or dominance). Background whispers react to their presence—some encouraging, some teasing, some warning.

Phase 2: Exploring Boundaries

As they navigate, they must make physical and psychological choices:

* Do they enter a space alone, or wait for a voice to invite them?

* Do they observe from the shadows, or claim a chair in the center of a room?

Each choice subtly changes their environment, leading them toward one of several possible conclusions.

Phase 3: The Ultimate Choice (*Revealing Their True Role on VR*)

At the maze's core, they reach The Chamber of Surrender & Command—a final space that will allow the spectator to enter on VR.

Possible Maze Elements & Interactions

* The Watcher's Corridor – A hallway lined with small, glowing peepholes. Looking through the Chambers.

* The Chain Room – A chamber where chains hang from above. If the user pulls one, it might unlock a new path—or cause the environment to tighten around them.

* The Throne & The Collar – A crossroads where they must choose: sit in an ornate throne to take control of the experience, or kneel to be guided through an unknown path.

* The Infinite Curtain Hall – Endless flowing red drapes, moving with invisible winds. Pushing through them reveals figures whispering secrets, guiding the user deeper.

* The Room of Echoes – A minimal space where sound and fragrance combine as haunting whispers, revealing alternative sensations they could have explored.

Interactions in VR due to Character Selection

The Voyeur (Observer / Guide)

Watches others but cannot touch or intervene directly. Unlocks hidden paths for submissives or grants obstacles to dominants. May eventually be drawn into the game as a participant.

The Dominant (Controller / Architect)

Given the power to open and close doors, control lighting, and manipulate the environment. Can command submissive players to perform actions to progress. Some rooms allow dominants to "design" the challenge for others, choosing punishments or rewards. If they fail to assert control, their role may be stripped, forcing them into submission.

The Submissive (Seeker / Subject)

Must follow the guidance of dominants and voyeurs to progress. Certain paths require obedience—e.g., kneeling to open a door, standing still to unlock a corridor. The deeper they go, the more choices they relinquish—or reclaim. If they rebel too much, they may be exiled from the maze or turned into voyeurs.

Proposal 02

A Sensory Experience

A Journey Through Digital Sexuality, Gender Fluidity & Sensory Exploration

Concept & Themes

a sensory-driven art installation that blurs the line between physical and digital intimacy, inviting participants to explore desire, power, gender identity, and erotic roleplay in an immersive, interactive space.

This experience is designed as a dreamlike initiation into a new self—a space where the body is fluid, where identity is performed and transformed, and where intimacy transcends physical touch.

Themes Explored:

- * Gender as Performance & Play – Identity shifts dynamically through interaction.
- * Sensory Intimacy Beyond the Body – Participants explore new ways to connect through digital space.
- * Power, Surrender & Control – Roleplay dynamics emerge naturally, shaped by player choice.

Installation Setup

The Physical Environment (*What people experience outside VR*)

The installation is designed to gradually dissolve reality, easing participants into a heightened sensory state before entering VR. It consists of three key areas:

1. The Threshold: The Ritual of Entry

- * A soft-lit, translucent corridor where silhouettes of other participants can be seen moving within.
- * Gentle, diffused pink and red lighting casts dreamlike reflections on the fabric walls.
- * A warm, slow breeze passes through, engaging the sense of touch before players step inside.

Participant Choice:

Upon arrival, visitors receive a symbolic object (mask, ring, or collar) that will influence their role in VR. They can choose to keep it visible (declaring their role) or hidden (remaining an enigma).

The Sensory Chamber: A Space of Transformation

This space is fluid, interactive, and intimate, encouraging sensory play before entering VR.

Design Elements:

- * Soft, padded enclosures draped in sheer fabrics for semi-private interactions.
- * Circular light zones that react to movement—stepping into them triggers sound, color shifts, or whispers.
- * Gilded cages & suspended swings—symbolic spaces of power dynamics and trust.
- * Projected digital avatars on translucent screens, mirroring the blurred boundaries between the physical and virtual self.

Participant Experience:

- * They can observe others moving through the space, sensing the presence of strangers before engaging.
- * Soft whispers fill the room—fragmented conversations from past visitors, creating a sense of history.
- * Some may choose to engage in pre-VR roleplay, using voice, movement, or symbolic gestures.

The Passage: The Final Portal Before VR

- * A narrow, fabric-lined corridor that tightens slightly as participants step through.
- * The deeper they go, the ambient sound shifts—whispers turn into deep pulses, mimicking a heartbeat.
- * A slow mist rolls in, and the physical world fades into digital as the headset is placed on.

The Eroticissima World (Inside VR)

Once inside the headset, participants awaken in a mystical, surreal open-world dungeon—a place where desire, fantasy, and power dynamics unfold.

Visual & Sensory Design:

- * Walls pulse like living fabric, shifting and responding to the user's movements.
- * Neon-lit corridors fade into darkness, revealing glimpses of other players behind sheer digital curtains.
- * Warm, flickering light sources (candles, bioluminescent plants) create an intimate, seductive atmosphere.
- * Sensory feedback (vibrations, wind effects, binaural whispers) enhance presence and connection.

Experience & Journey

Phase 1: Entering the Installation

Visitors cross the translucent threshold, seeing only shadowy silhouettes beyond the veil.

- * They are handed an artifact (mask, ring, or collar), hinting at the identity they might assume.
- * Soft whispers and sensual lighting shift as they move, preparing them for transformation.

Phase 2: Exploring Boundaries

Participants step into the Sensory Chamber, engaging with textures, lights, and projections.

- * Some choose to observe, while others engage in pre-VR roleplay through movement, whispers, or interaction.
- * The space teases what is to come—introducing digital avatars, symbolic structures, and fragmented narratives.

Phase 3: The Ultimate Choice (*Revealing Their True Role on VR*)

The final corridor tightens slightly around them, creating a feeling of submission or passage.

- * A deep pulse vibrates through the floor as they transition into the Eroticissima VR world.
- * Their physical form dissolves, replaced by a digital self shaped by their choices.

Possible Dungeon Elements & Interactions

*The Whispering Veil - A floating, fabric-like portal that only reveals what lies beyond when participants whisper their desires into it.

* The Candlelit Throne - A central chamber where players can assume control over the space, drawing others toward them through voice and presence.

* The Enchanted Cage - A suspended, glowing enclosure—a symbolic space of surrender, trust, and vulnerability.

* The Reflection Pool - A mirrored floor chamber where players see a distorted reflection of their avatars, challenging their perception of identity.

Interactions in VR due to Character Selection

The Voyeur (Observer / Guide)

Watches others but cannot touch or intervene directly. Unlocks hidden paths for submissives or grants obstacles to dominants. May eventually be drawn into the game as a participant.

The Dominant (Controller / Architect)

Given the power to open and close doors, control lighting, and manipulate the environment. Can command submissive players to perform actions to progress. TECHNICAL RIDER

VR Setup

Eroticissima Technical Rider

General Overview

- Installation Setup: Two separate immersive VR chambers, each equipped with a full VR setup and sensory elements.
- Spatial Requirement: Minimum 8m x 8m per chamber, allowing movement and comfort.
- Power Requirements: Dedicated circuits to ensure stable power for computers, projectors, lighting, and sound.

1. VR & COMPUTER HARDWARE

Per Chamber (x2):

- VR Headset: HTC Vive Pro 2 or Meta Quest Pro (connected to a PC).
- VR Base Stations: 2 x HTC Vive Base Stations 2.0.
- VR Controllers: 2 per chamber.
- PC Workstation: High-performance VR-ready PC.
 - CPU: Intel i7 / AMD Ryzen 7 or higher.
 - GPU: NVIDIA RTX 4080 or higher.
 - RAM: 32GB DDR4 or higher.
 - SSD: 1TB NVMe for fast load times.
- Mounting Structure: Metal frame for hanging VR headsets.

2. VISUALS & PROJECTION

- Projection System (for real-time player visuals):
 - 1 x Short-throw laser projector (per chamber).
 - Screen: Transparent fabric projection screen.
- Additional Displays (for spectators outside the chambers):
 - LED screen per chamber.
 - 1 x HDMI splitter & extenders.

3. AUDIO SYSTEM

- Binaural Sound System:
 - VR-Integrated 3D Spatial Audio
 - Additional directional speakers for external ambiance.
- External Sound Design (optional):
 - 2 x Powered Speakers (Genelec 8040B or equivalent).
 - 1 x Audio Interface (Focusrite Scarlett 8i6).

4. STRUCTURE & FABRIC ENCLOSURE

- Cubic Metal Frame (per chamber):
 - Size: 3m x 3m x 3m.
 - Material: Aluminum or steel truss.
- Privacy Fabric:
 - Semi-transparent, flowing fabric draping.
 - Mounted on railings for flexibility.
 - Color: Pastel pink & blue gradient.

5. INTERACTIVE & SENSORIAL ELEMENTS

- Motion-Triggered Light Zones
 - LED floor strips & wall-mounted sensors
- Haptic Feedback System (optional).
 - SubPac Wearable Haptic Vest (for deeper sensory immersion).
- Airflow Elements
 - Small fans for environmental sensory effects.

6. NETWORK & CONNECTIVITY

- Dedicated Internet Connection:
 - WiFi 6 Router.
 - Ethernet cables to ensure stable network for multiplayer/remote interactions.
- Remote Monitoring:
 - TeamViewer or similar software for troubleshooting.

7. TECH SUPPORT & CREW REQUIREMENTS

- Setup Time: 2-3 days for full installation
- Crew Requirements:
 - 1 VR Technician (setup, calibration, troubleshooting)
 - 1 Projection/Lighting Designer
 - 1 Sound Designer
 - 1 Experience Facilitator (guiding participants, onboarding)

8. ENVIRONMENTAL CONDITIONS -Optional-

- Room Temperature: Maintained at 21-23°C to prevent overheating of VR equipment.
- Sound Isolation: Acoustic dampening fabric to minimize external noise interference.
- Flooring: Soft-padded or industrial carpet for comfort and stability.
